## Netversant uses RF Logics' Card Reading System at Regional Headquarters

**Torrance, CA, May 2, 2005**– RF Logics Inc., suppliers of high security proximity card reading systems, smart card systems and fingerprint and facial recognition biometric readers for access control applications, supplied new reader systems for use with a Lenel access control system installed in Netversant's Regional Headquarters for the Inter Mountain area in Denver, Colorado.

This installation which is the first by Netversant to use RF Logics' products, utilizes the RF-10 and RF-20 card readers and IDK50 proximity key fobs showed the ease of installation and the reliability and quality of the RF Logics products to great advantage.

"The RF Logics were easy to install, have outstanding looks and work great with the RF Logics IDK50 Key Fobs," said Randy Maness, Netversant's ESS Project Manager. "More projects are being sought where RF Logics products may be installed."

For more information about RF Logics, visit our web site at [www.RFLogics.com](http://www.RFLogics.com) or call us at (310) 782-8383. RF Logics has been providing credential verification and biometric products to the North American access control market since 2000.
